

Anti-Glare coater (AG coater)

Creating Nano Anti-Glare coater is a condensed sub-micron film coating that is put on glass or other plastic substrates to cause light to scatter and avoid reflection.

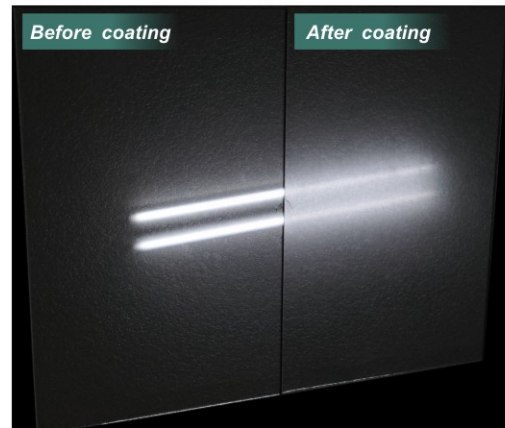

Product Features

- High precision mass flow controller
- A proper flow designed spray chamber that reduces dust pollution
- Variable scan speeds to increase uniformity
- Modular design: AP Plasma treatment system and AS coater are optional

Fields of Industrial Applications

- Protective glass for touch panel
- E-paper & PDA
- Satellite navigation screen
- Laptop screen

Specifications

Production Speed	0.5-1 M/min
Effective Width	400mm-1200mm
Gloss	GU 50-100
Haze	5-15
Ra	<100nm
